Sales Onboarding & Training Module — Specification and Curriculum (Bytes Platform)

Build this as a gated training module inside the existing salary system. New reps finish two training tracks and pass a certification before they can make live calls that count toward quota. Calls follow a "dial first, look while it rings" routine and a data-backed call structure. The AI features run on one cheap OpenAI model tier, for well under $5 per rep per month. The one exception is voice roleplay, which should stay optional and capped.

TL;DR

- **What to build:** a training module with three learning tracks (Product Knowledge, Sales Coaching, and a placeholder "How the Company Works"). It includes quizzes, flashcards, roleplays, a 100-point call scorecard and certification gates, and it is wired to the salary system so certification switches on quota credit and a penalty-free ramp. An MVP without AI takes about 4 weeks. AI features add about 4 more.
- **What reps learn:** a short call structure backed by data. Gong's analysis of 90,380 cold calls found that "How have you been?" openers succeeded 10.01% of the time against a 1.5% baseline, and stating the reason for the call lifted success 2.1x. Reps also learn a SAM.gov classification rubric (which service to lead with), a 30-second website scan they do while the phone rings, and a library of 17 objections.
- **What AI costs:** OpenAI retires several of the models you asked about soon. o4-mini shuts down Oct 23, 2026, and gpt-4o-mini and gpt-4.1-mini on Jan 14, 2027. Default to gpt-6-luna ($0.10 input / $0.50 output per 1M tokens, checked Oct 22, 2026). morphllm +2 Text roleplay, call grading, the pitch generator and the website-scan helper together come to roughly $1–3 per rep per month. Voice roleplay (gpt-realtime-2.1-mini) is the only expensive feature and needs a hard cap.

Part A — Purpose, Audience, Success Criteria, Glossary

A.1 Purpose

Bytes Platform hires reps with no sales background and no technical background. Right now the sales lead teaches everything by hand: what a website "revamp" is, what to say when an owner answers, and how to handle "send me an email." This module turns that knowledge into a repeatable, measurable path. It lives inside the salary system the company already uses, so training progress and certification feed straight into compensation.

A.2 Audiences

Audience	What they need from this document

Sales lead / trainer	The curriculum, scorecard, KPI targets, certification rules and coaching workflow (Parts C, D, G, H)
New reps	Plain-English lessons, word-for-word scripts, cheat sheets (Parts C, D, H)
Developer	Data model, endpoints, screens, gating logic, salary-system hooks and OpenAI service design (Parts B, E)

A.3 Success criteria (measure at 90 days)

1. The sales lead spends **≥50% less time** on one-to-one onboarding per new rep (baseline it in week 0).
2. Every rep passes the **Live-Calling Certification** (≥80% on the written exam and ≥70/100 on two scored roleplays) before their dials count toward quota.
3. Ramp target: reps reach their full meetings quota by about month 3. That matches The Bridge Group's 2025 benchmark of 3.0 months average SDR ramp, the lowest since 2010 and down from a 3.8-month peak in 2014. In the same study only 60% of SDRs were at quota, the lowest in its history.
4. Call quality: the average scorecard result on graded live calls rises from week 3 to week 8.
5. Compliance: zero do-not-call violations. Every "remove me" request is logged within 24 hours.

A.4 Key assumptions (stated explicitly)

- Service prices other than the contract-management build are unknown. They appear as **[PRICE]** placeholders. The yearly AI-token fee for the contract-management build is **[TOKEN_FEE]**.
- The salary system's tech stack is unknown, so Part B is stack-agnostic.
- Delivery timelines for services are **[TIMELINE]** placeholders unless obvious (for example, the SEO 3/6-month packages).
- Benchmarks quoted from vendors (Gong, The Bridge Group, roleplay vendors) are mostly from SaaS sales teams. Calling small government contractors will produce different numbers. Use them as starting targets and recalibrate after 4 weeks of your own data.

A.5 Glossary (plain English)

Term	Meaning
Dial	Any outbound call attempt, whether answered or not
Connect / Conversation	A real person (ideally the decision-maker) picked up and you spoke
Gatekeeper	Someone who answers for the decision-maker (receptionist, office manager)
Decision-maker (DM)	The person who can say yes, usually the owner/president at small contractors
Opener	The first 7–10 seconds of the call

Pattern interrupt	Saying something unexpected so the prospect stops their automatic "not interested" reflex
Reason for call	One sentence explaining why you're calling *them*
Discovery / problem questions	Questions that uncover whether they have a problem we solve
Pitch / bridge	Connecting their problem to our service in 1–2 sentences
Meeting / demo	The next step we book: a 15–30-minute call with [CLOSER/SALES LEAD]
Show rate	% of booked meetings that actually happen
Objection	A reason the prospect gives to say no or delay
Brush-off	An objection that is really a reflex ("not interested"), not a real reason
Disposition	The code you log after each call (VM, GK, NI, CB, BK, DNC…)
Cadence	The planned sequence of follow-up calls/emails/texts
SAM.gov	The federal government's registry; contractors must register to win federal work
NAICS code	A 6-digit code describing a company's industry; contracts are tagged with them
Set-aside	Contracts reserved for certain small businesses (8(a), HUBZone, WOSB, SDVOSB, etc.)
Capability statement	A one-page "resume" for a contractor that contracting officers and primes expect
Contracting officer (CO)	The government employee who awards contracts
Prime / sub	A prime holds the government contract and often hires small "subs"
Solicitation / RFP / RFQ	The government's request for bids
Compliance matrix	A checklist mapping each requirement in a solicitation to where the proposal answers it
SSL	The padlock/https on a website; missing = "Not Secure" warning in browsers
SEO	Making a website show up in Google for searches like "HVAC duct cleaning Tampa"
SMM	Social media marketing: posts, reels and ads on

	Facebook/Instagram/LinkedIn
AI automation	Software that does repetitive office work automatically (answers calls, sends texts, sorts emails)
Ramp	The period before a new rep is expected to hit full quota

---

Part B — Module Architecture & Developer Specification

B.1 Design principles

1. **Training is part of the salary system.** Training state (certifications, ramp status) drives compensation rules through explicit hooks (B.9).
2. **Gates before access.** No live dialing credit until the rep is certified.
3. **Small units, repeated.** Most lessons take 5–10 minutes. Flashcards use spaced repetition, and a 5-minute daily drill keeps skills fresh.
4. **AI is optional.** Every AI feature has a fallback that works without an API key (B.11).
5. **Content is data.** Lessons, quizzes, scripts, objections and prompt templates live in the database and can be edited by the trainer without a deploy.

B.2 Roles & permissions

Role	Can do
Admin	Everything, plus settings (API key, token caps, salary hooks)
Trainer / Sales Lead	Create/edit content, assign paths, review AI-graded calls, override scores, grant/revoke certifications, view all analytics
Rep	Take lessons, drills, quizzes, roleplays; upload calls for grading; view own progress and leaderboard
Developer (service account)	API access for integrations; no access to rep PII beyond IDs

B.3 Data model (entities and key fields)

Entity	Key fields	Notes
`users`	id, name, email, role, hire_date, status, salary_system_employee_id	Link to the salary system's employee record
`tracks`	id, code (T1/T2/T3), title, order, is_placeholder	T3 = placeholder
`courses`	id, track_id, title, order, required (bool)	

`lessons`	id, course_id, type, title, body_md, media_url, est_minutes, order, version, published	type ∈ reading, video, flashcard_deck, quiz, roleplay, scenario, checklist
`quiz_questions`	id, lesson_id, type (mcq/multi/true_false/short_answer/order), prompt, options_json, answer_json, explanation, tags	Tags let you build the exam from the question bank
`flashcards`	id, deck_lesson_id, front, back, tags	
`flashcard_reviews`	id, user_id, flashcard_id, ease, interval_days, due_at, last_result	SM-2-style spaced repetition
`roleplay_scenarios`	id, title, persona_json, objective, difficulty, objections_json, rubric_id, source_lead_id (nullable)	Personas can be built from SAM.gov rows
`rubrics`	id, name, criteria_json (criterion, max_points, description, examples)	The 100-point scorecard is stored here
`attempts`	id, user_id, lesson_id, started_at, finished_at, score_pct, passed, answers_json	One row per attempt
`roleplay_sessions`	id, user_id, scenario_id, mode (text/voice), transcript, ai_score_json, trainer_score_json, final_score, duration_s	
`call_reviews`	id, user_id, audio_url, consent_flag, transcript, ai_score_json, trainer_override_json, final_score, status	Uploaded real calls
`certifications`	id, code (PRODUCT_CERT, LIVE_CALL_CERT, BYTESCON_CERT…), user_id, granted_at, granted_by, expires_at, revoked_at	
`badges` / `user_badges`	id, code, title, criteria_json / user_id, badge_id, earned_at	Gamification
`assignments`	id, user_id, track_id/course_id, assigned_by, due_at	
`gates`	id, target_type (lesson/course/permission), target_id, rule_json	Example: `{"requires":[{"lesson":"T1-QUIZ-FINAL","min_score":80}]}`
`ai_prompts`	id, key, version, model, system_prompt, user_template, json_schema, temperature, active	Prompt templates stored in the database
`ai_sessions`	id, user_id, feature, model, input_tokens, cached_tokens, output_tokens, audio_seconds, cost_usd, latency_ms, created_at, prompt_version	One row per AI call

`ai_budgets`	user_id, month, cap_usd, spent_usd, hard_stop (bool)	Per-rep monthly cap
`leads_cache`	id, narrative_hash, pitch_points_json, persona_json, model, created_at	Caches AI outputs per Capabilities Narrative
`site_scans`	id, url, scanned_at, checks_json, summary_text	Cached 7 days
`ramp_status`	user_id, phase (TRAINING/SUPERVISED/RAMP_50/RAMP_75/FULL), phase_started_at, quota_multiplier	Read by the salary system
`events_outbox`	id, type, payload_json, created_at, delivered_at	Hooks into the salary system
`notifications`	id, user_id, type, body, read_at	

B.4 Learning paths

- **Track 1 — Product Knowledge** (Part C): services, classification rubric, website scan, contract-management build. Ends with the **Product Certification** (PRODUCT_CERT).
- **Track 2 — Sales Coaching** (Part D): mindset, call anatomy, openers, gatekeepers, voicemail, discovery, booking, objections, psychology, tonality, follow-up, CRM discipline, KPIs. Ends with the **Live-Calling Certification** (LIVE_CALL_CERT).
- **Track 3 — How the Company Works**: **placeholder only.** Create the track with three empty courses ("Tools & logins," "Handoff to fulfillment," "HR & pay policies"). *Note to trainer: fill this in later. It is not required for any certification in v1.*

B.5 Progression & gating rules (default; trainer-editable)

Gate	Rule
Lesson unlock	Lessons unlock in order. Each quiz needs ≥80% to unlock the next course. Unlimited retakes, 10-minute cooldown, questions shuffled from the bank
Track 2 unlock	Track 1 courses C1–C3 completed (rep can start mindset lessons in parallel)
PRODUCT_CERT	Track 1 final exam ≥80% + classification drill (10 SAM.gov rows) ≥8/10 correct
LIVE_CALL_CERT	PRODUCT_CERT + Track 2 final exam ≥80% + 2 roleplays scored ≥70/100 (at least one human-reviewed) + objection drill ≥80% + compliance quiz 100%
Live calls count toward quota	Only after LIVE_CALL_CERT (salary hook)
BYTESCON_CERT (optional, to pitch the contract-	Bytescon lesson quiz ≥85% + 1 roleplay ≥75/100

management build)	
Recertification	Compliance quiz every 6 months; if 4-week rolling avg scorecard <55, the trainer may set the rep to "SUPERVISED"

B.6 Certification exam (spec)

- 40 questions drawn from tagged question banks: 15 product, 8 classification, 10 sales process/objections, 7 compliance (the compliance questions must all be answered correctly).
- 45-minute timer. Questions are randomized and the order is shuffled.
- Practical part: 2 roleplays (one "friendly owner," one "skeptical owner with 3 objections"), graded with the 100-point rubric. A human must confirm at least one.

B.7 API endpoints (REST; adapt to your stack)

```
Auth & users
GET    /api/me
GET    /api/users?role=rep                    (trainer)
Content
GET    /api/tracks | /api/tracks/{id}/courses | /api/courses/{id}/lessons
POST   /api/lessons                           (trainer)  PUT/DELETE /api/lessons/{id}
POST   /api/lessons/{id}/publish              (trainer, versioned)
Assignments
POST   /api/assignments                       (trainer)  GET /api/assignments?user_id=
Learning
POST   /api/lessons/{id}/attempts             start
PUT    /api/attempts/{id}                     submit answers -> score, pass/fail, unlocks
GET    /api/flashcards/due                    today's spaced-repetition queue
POST   /api/flashcards/{id}/review            {result: again|hard|good|easy}
GET    /api/drills/today                      5-minute daily drill
Roleplay & calls
POST   /api/roleplays                         {scenario_id | lead_row} -> session
POST   /api/roleplays/{id}/turn               text turn (or WebRTC token for voice)
POST   /api/roleplays/{id}/finish             -> AI score
POST   /api/call-reviews                      upload audio (+consent flag)
GET    /api/call-reviews?status=needs_review  (trainer)
PUT    /api/call-reviews/{id}/override        (trainer)
Live-call helpers
POST   /api/assist/pitch                      {capabilities_narrative} -> 3 talking points
POST   /api/assist/site-scan                  {url} -> checklist + plain-English lines
POST   /api/assist/classify                   {lead_row, scan_id?} -> service recommendatic
Certification & gamification
GET    /api/certifications?user_id=           POST /api/certifications/{code}/grant (traine
GET    /api/leaderboard?period=week
Analytics & AI ops
GET    /api/analytics/cohort | /api/analytics/rep/{id}
GET    /api/ai/usage?month=                   POST /api/ai/budgets (admin)
Integration
GET    /api/integration/ramp-status/{employee_id}
POST   /api/integration/webhooks              (register salary-system listener)
```

B.8 Screens

Rep screens

1. **My Path**: track/course progress bars, next lesson, locked items with an "unlock by…" hint.
2. **Today**: daily 5-minute drill, flashcards due, one roleplay suggestion, yesterday's call scores.
3. **Lesson player**: reading/video/checklist with a "mark complete" button, plus an inline mini-quiz.
4. **Roleplay**: choose a scenario or "random SAM.gov lead". Chat or voice. Score card at the end with 3 "do this next time" tips.
5. **Flashcards**: flip, then rate Again/Hard/Good/Easy.
6. **Live Assist panel** (side panel used while dialing): paste/auto-load the lead row. It shows 3 talking points, the website scan results and the suggested service.
7. **Scoreboard**: weekly leaderboard (drills, roleplay avg, meetings booked), badges.

Trainer screens

1. **Content editor**: Markdown editor, quiz builder, flashcard bulk import (CSV), roleplay persona builder, rubric editor, prompt-template editor (versioned).
2. **Assign paths**: assign tracks to reps or cohorts and set due dates.
3. **Review queue**: AI-graded calls and roleplays sorted by lowest score or biggest AI-vs-trainer disagreement. Listen, see the transcript and per-criterion scores, override, leave a comment.
4. **Cohort dashboard**: completion %, quiz pass rates by question (finds bad questions), certification dates, ramp phase, AI spend per rep.
5. **Coach digest**: weekly auto-summary (see E.10).

B.9 Integration hooks into the existing salary system

Use an **outbox/event** pattern so the training module never edits payroll data directly.

Event	Payload	Suggested salary-system rule
`training.track_completed`	user, track, date	Optional **training completion bonus** [AMOUNT]
`training.certified` (LIVE_CALL_CERT)	user, date	Start counting call volume/time toward quota and commissions from this date. Start the ramp schedule
`training.ramp_phase_changed`	user, phase, quota_multiplier	Apply a **ramp quota**: e.g., month 1 after cert = 50% quota, month 2 = 75%, month 3 = 100%. This mirrors a common SDR ramp pattern of 100% base pay with a reduced quota during roughly the first 90 days
`training.supervised_flag`	user, reason	Pause penalties while the rep is coached. Don't pause base pay

`training.recert_due/expired`	user	Warning first, then the compliance cert lapses. Optionally block quota credit until renewed

Penalty-free ramp period: while `ramp_status.phase ∈ {TRAINING, SUPERVISED, RAMP_50}`, the salary system should *not* apply missed-target deductions. It should still pay any per-meeting incentive. Make the length configurable ([N] weeks).

Call metrics: roleplay minutes must **not** count as call time in the salary formula. Use a separate `training_minutes` metric if you want to reward practice (for example, a badge or a small SPIFF).

Integration options: (a) shared DB view `v_rep_ramp_status` that the salary system reads; (b) webhook POST to the salary system; (c) a nightly CSV export. Pick whichever the salary system already supports.

B.10 Analytics

- Funnel per rep: dials → connects → conversations → meetings booked → meetings held (show rate).
- Learning: time-to-cert, quiz first-attempt pass rate, flashcard retention (% "good/easy"), roleplay score trend.
- Quality: scorecard average per criterion (shows *what* to coach), AI-vs-human score gap (shows whether the AI grader can be trusted).
- Cost: AI spend per rep and per feature against the cap.
- Correlations to check monthly: does the roleplay score in week 2 predict meetings in weeks 5–8? If not, change the rubric.

B.11 OpenAI integration design

One backend service (`ai-gateway`), never called from the browser with the raw key.

- **Prompt templates in the DB** (`ai_prompts`), versioned. Every AI call logs `prompt_version` .
- **Model config by feature** (editable), not hard-coded. This matters because OpenAI is retiring models quickly (see E.1).
- **Per-rep monthly cap** (`ai_budgets`): soft warning at 80%, hard stop at 100% (trainer can raise). A global org cap is enforced too.
- **Logging:** tokens in/cached/out, audio seconds, cost (computed from a `model_prices` config table), latency, errors.
- **Structured outputs:** request JSON matching a schema for grading, classification and flashcards, so the app can parse results reliably.
- **Caching:** (1) keep the long, static system prompts at the *start* of every request so OpenAI's automatic prompt caching applies; (2) app-level cache keyed by `hash(capabilities_narrative)` and `hash(url)` ; (3) batch nightly jobs (pitch points for tomorrow's lead list, coach digest, flashcard generation) through the Batch API at 50% off.
- **PII handling for prospect data:** send the AI only what it needs. The Capabilities Narrative, firm name and city/state are fine. **Strip the contact person's name, email and phone** before sending

(replace with `{CONTACT}`). Don't send call audio from all-party-consent states unless the consent flag is set (Part F). Retention: delete raw audio after [30] days and keep transcripts and scores.

- **No-key fallback mode** (key absent, cap reached, or API down): the app switches to a static mode. In this mode it uses:
  - pre-written personas and branching scripted roleplays (decision tree of prospect replies)
  - keyword-based pitch points (a lookup table from narrative keywords to talking points, Part C.4)
  - rule-based website checks (HTTP/HTTPS, viewport tag, copyright year regex, social links regex)
  - manual call grading by the trainer using the same rubric
  - pre-built quizzes and flashcards from the DB.
    Every AI screen must show "AI unavailable — using standard mode" and stay usable.

B.12 Phased build plan

Phase	Weeks	Scope
0. Setup	0.5	Roles, link to salary-system employee IDs, content import (this document → DB)
1. MVP (no AI)	1–4	Tracks/courses/lessons, quizzes, flashcards with SM-2, gating, certifications, trainer editor, manual call review with rubric, ramp_status + events to salary system, basic dashboard, rule-based website scan, keyword pitch lookup
2. AI core	5–8	ai-gateway, budgets/logging, text roleplay with SAM.gov personas, AI objection drills, AI call grading (transcription + rubric), pitch generator with cache, AI website-scan summary, auto quiz/flashcard generation
3. Engagement	9–10	Leaderboard, badges, daily drill engine, coach digest
4. Optional voice	11–12	Voice roleplay via Realtime (capped), voicemail practice grading

---

Part C — Track 1: Product Knowledge Curriculum

C.0 Course map

Course	Lessons
C1 Who we call & why	C1.1 Government contractors in plain English · C1.2 Reading a SAM.gov row in 10 seconds
C2 Our services	C2.1 Websites · C2.2 SEO · C2.3 SMM · C2.4 Done-for-you builds & AI automation · C2.5 Custom contract-management system (Bytescon)

C3 Classifying prospects	C3.1 Dial-then-look workflow & 30-second scan · C3.2 Classification rubric & decision tree · C3.3 Worked examples (9 prospect types)
C4 Final	Product exam + classification drill → PRODUCT_CERT

C1.1 Government contractors in plain English

What they are: Businesses that sell products or services to federal, state or local government. Examples include security guards for a federal building, lockers for a military base, and repairs on Air Force aircraft. Many are small: an owner, a few staff, and the owner often answers the phone.

How small contractors win work (what reps should understand):

1. **Register in SAM.gov.** Required to get federal contracts. That's why our lead list exists.
2. **NAICS codes** say what they do. Agencies tag each contract with a NAICS code.
3. **Set-asides**: some contracts are reserved for small businesses or for certified groups (8(a), HUBZone, women-owned, service-disabled veteran-owned).
4. **Market research:** before posting a contract, contracting officers look for capable small businesses. Many search SBA's **Small Business Search (SBS, formerly DSBS)**, and prime contractors use it to find small-business partners. fedbizaccess thebiddingcompass
5. **Capability statement:** the one-page "business resume" COs and primes expect. Contracting officers, small business specialists and primes use it to decide quickly if a company is worth a closer look.
6. **Past performance:** proof they've done similar work before.
7. **Subcontracting to primes:** large primes on big contracts must have small-business subcontracting plans. Under FAR 19.702, as amended by the FAR Council's final rule FAC 2025-06 (effective Oct 1, 2025), the threshold is contracts over $900,000 ($2 million for construction). Primes check out a potential sub before they reply, often on its website.

Why this matters for us: a contracting officer or prime's small-business liaison will often **search the company's name online** and land on its website. An outdated or missing website, or no downloadable capability statement, makes a company look less credible exactly when it is being checked. *(These descriptions of CO/prime behavior come from contractor-marketing guides, which have a commercial interest. Present it as "how it commonly works," not as a government rule.)*

Where SEO/SMM fit: contracting officers don't usually find vendors through Google ads or Instagram. For a **pure-federal** contractor (e.g., aircraft depot maintenance), SEO and social media matter *less*. The website, the capability statement and bid tools matter *more*. For contractors who **also sell to commercial or local customers** (HVAC, duct cleaning, security guards for private businesses, electricians), SEO and SMM can bring in real revenue. **Always ask: "What % of your work is government vs. private/commercial?"**

Who answers the phone: at very small firms, often the owner (sometimes on a cell phone). At 10–50 employees, an office manager or receptionist. Expect gatekeepers more often at larger firms.

C1.2 Reading a SAM.gov row in 10 seconds

Read in this order: **Firm name → Capabilities Narrative → City/State → Website (blank?) → Contact name.**

Narrative signal	Likely industry	Likely size	Likely pain points
"ARMED AND UNARMED SECURITY OFFICERS"	Guard services	10–200 staff, many part-time	Hiring guards, scheduling shifts, winning commercial clients, compliance paperwork
"Aircraft CLS, depot maintenance"	Aerospace maintenance (CLS = contractor logistics support)	Specialized, often 20–500	Credibility with primes, bids/proposals, compliance, tracking deliverables
"LOCKERS, SHELVING, BENCHES"	Furniture/storage supplier/reseller	Small reseller or distributor	Quote requests, catalog online, findability by facility managers
"Environmental testing lab" / forensic lab	Lab services	5–50	Sample intake & tracking, client portal, accreditation display, commercial clients
"electrical construction"	Electrical contractor	5–100	Commercial/residential leads, bidding, crew scheduling, Google visibility
"fasteners/industrial supply"	Distributor	5–50	Quote handling, inventory, online catalog, repeat orders
"2-way radio & tower construction"	Telecom/communications	5–50	Project tracking, credibility, regional commercial clients
"HVAC/air duct cleaning"	Home/commercial services	3–30	Local leads, reviews, missed calls, appointment booking, seasonal demand
"CCTV/access control integrator"	Security systems	5–50	Commercial leads, quoting, service contracts, project management

Size guesses (rule of thumb): a narrative that is very short, ALL CAPS and lists products → small reseller. A long list of agencies, certifications and contract vehicles → larger and more sophisticated (more likely to have a bid team, so a better fit for the contract-management build).

Quiz (C1):

1. What does a NAICS code describe? *(industry/type of work)*
2. True/False: A pure-federal aircraft maintenance contractor is our best SEO prospect. *(False)*
3. Name two things a CO or prime may check before contacting a small business. *(website, capability statement, SBS profile, past performance)*

4. What question tells you whether SEO/SMM is relevant? *("What % of your work is government vs. private?")*

Flashcards (C1): Set-aside ↔ contracts reserved for small/certified businesses · Capability statement ↔ 1-page business resume for government buyers · Prime ↔ company holding the main contract that hires subs · SBS ↔ SBA's searchable small-business database that COs and primes use.

C2.1 Websites

What it is: the company's home on the internet. We build: **static** (simple pages, fast, cheap to host), **dynamic with admin panel** (owner can edit content, add news/projects), **WordPress** (popular content system, easy edits, many plugins), **frontend** (the visual part, built on an existing backend), **full-stack** (frontend + backend + database, for portals and custom features), **revamps** (redesign/modernize an existing site) and **new website design**.

Who needs it: anyone with no site, a broken site, an old site (no padlock, not mobile-friendly, copyright 2016), or a site with no capability statement or NAICS/certifications visible.

What's included (fill in): pages [N], capability statement page/PDF, contact form, mobile-responsive design, SSL, basic on-page SEO, [hosting/maintenance terms]. Price: [PRICE]. Delivery: [TIMELINE].

Qualifying questions:

- "When was the site last updated?"
- "Do primes or contracting officers ever ask for your capability statement? Where do you send them?"
- "Does the site bring you any work today, or is it just there?"
- "Can you edit it yourself, or do you have to call someone?"
- "Who built it? Are they still around?"

One-liner pitch: "We build contractor websites that make you look as credible online as you are on the job: capability statement, NAICS codes and certifications front and center, so when a prime or CO looks you up, they see a real company."

Common prospect questions:

- *"How long does it take?"* → "Usually [TIMELINE]. The specialist will confirm after a 15-minute look."
- *"Do I own it?"* → [Confirm company policy; do not guess.]
- *"Can you keep my domain?"* → "Yes, we work with your existing domain." [confirm]

Do NOT promise: specific Google rankings, more contracts, "government-approved" anything, delivery dates, or prices outside the approved list.

C2.2 SEO (3-month and 6-month packages)

What it is: work that helps a site show up when people search Google for what the company does in its area ("air duct cleaning Orlando"). It covers fixing the site, writing useful pages, local listings (Google Business Profile), and building reputation.

Who needs it: contractors with **commercial/local customers** who search online: HVAC, duct cleaning, electrical, security guards for private sites, integrators, labs serving private clients. **Less relevant** for pure-federal firms.

Packages: 3-month [PRICE] and 6-month [PRICE]. Tell the prospect honestly that SEO results take time, so the 6-month package suits companies serious about local leads.

Qualifying questions:

- "When someone in [city] searches for [service], do you show up?"
- "Roughly what % of your work is private vs. government?"
- "Where do your commercial customers come from today?"

One-liner: "When a facility manager in [city] Googles [service], we make sure you're one of the first names they see, not the competitor down the street."

Do NOT promise: "#1 on Google," guaranteed traffic numbers, or results in weeks.

C2.3 Social media marketing (3-month and 6-month)

What it is: we run their social media. **Each month: 6 posts + 3 reels + an ad strategy.** The **ad budget is separate**: the client pays Meta (Facebook/Instagram) directly. Our fee covers content and strategy, not the ad spend.

Who needs it: companies with private/local customers or that are hiring (security guard companies recruit constantly; social media helps with hiring). Contractors whose last post was years ago look inactive when someone checks.

Qualifying questions:

- "Do you post anywhere now? When was the last post?"
- "Are you hiring right now? How do you find [guards/technicians]?"
- "Would you be open to running a small ad budget, paid directly to Meta?"

One-liner: "Six posts and three reels a month, plus an ad plan, so you look active and busy to every customer, prime and job applicant who checks you out."

Must say clearly: "Ad spend is billed by Meta directly to you; our package is the content and strategy." **Do NOT promise** follower counts, leads per month or virality.

C2.4 Done-for-you custom builds & AI automation

What we build: ERPs (one system for jobs, inventory, purchasing, billing), CRMs (track customers, quotes, follow-ups), management systems (scheduling, dispatch, HR), mobile apps, **AI voice receptionist** (answers calls 24/7, takes messages, books appointments), **email automation**, **SMS automation**, and general **AI automations**.

AI automation explained for a beginner: "AI automation means teaching software to do the boring, repeatable office work a person does today." Examples for a small contractor:

- A missed call at 7 p.m. → the AI receptionist answers, asks what they need and texts the owner a

summary.

- A quote request email arrives → it's sorted, logged in the CRM and answered with a "we got it" message automatically.
- A guard misses a shift check-in → an automatic SMS goes to the supervisor.
- A new solicitation matches their NAICS → they get an email alert (this overlaps with the contract-management build).

Who needs it: busy owners who say "we miss calls," "we're drowning in paperwork," "everything's in spreadsheets," "scheduling is a nightmare."

Qualifying questions:

- "What happens when a call comes in after hours?"
- "What's the most repetitive task your office does every day?"
- "Where do you track jobs, quotes and invoices today? Spreadsheets? Paper?"

One-liner: "We build the system that takes the repetitive work off your plate, whether that's answering calls, sending follow-ups or tracking jobs, so you and your office can focus on the work that pays."

Do NOT promise fixed prices before scoping (say "[PRICE] range, confirmed after a scoping call"), "replaces employees," or specific timelines.

C2.5 Custom contract-management system (internal name: Bytescon)

Framing rule (critical): this is **not** a subscription and not a platform they "sign up for." **We build them their own system, customized for their team.** Say: "We build you your own in-house system." Never say: "subscribe to our platform."

Pricing: $5,000–$8,000 one-time (depends on customization) + a **minimal yearly fee for AI token usage** ([TOKEN_FEE]). Explain the yearly fee simply: "The system uses AI to read solicitations and draft documents. The yearly fee just covers that AI usage. It's not a subscription to us."

What it does (plain English):

1. **Finds contracts** at federal level (SAM.gov) and on state & municipal portals, filtered by their state and their work.
2. **Rates each opportunity** against their expertise: a win-probability score and a **compliance gate** (does their NAICS match? Are they eligible for the set-aside? Do they have the required certifications?).
3. **Reads the solicitation** and pulls out every requirement into a **compliance matrix** (a checklist of what the proposal must answer).
4. **Drafts the proposal** sections for the team to edit.
5. **Pricing benchmarks** using public award data ("what did similar contracts go for?").
6. **Deadline tracking**: question deadlines, submission dates, reminders.
7. **Teaming/subcontractor handoff**: share a package with partners or subs.
8. **After award:** tracks the contract, deliverables and invoices.

Who needs it (best fits): contractors who **bid regularly** (several solicitations a month), have 1–3 people doing business development, mention many agencies/contract vehicles in their narrative, or complain about deadlines, compliance and proposal writing. **Weak fit:** firms that only subcontract to one prime, or that say they haven't bid in a year.

Qualifying questions:

- "How do you find new solicitations today: SAM.gov alerts, a bid service, someone checking manually?"
- "How many bids do you submit in a typical month?"
- "When a 60-page solicitation drops, who reads it and builds the checklist? How long does that take?"
- "Ever missed a deadline or been disqualified on a compliance detail?"
- "After award, where do you track deliverables and invoices?"

Pitch (30 seconds): "A lot of contractors your size tell us the hard part isn't doing the work, it's finding the right bids and getting proposals out without missing a requirement. We build you your *own* system, set up for your NAICS codes, your certifications and your states. It pulls opportunities from SAM.gov and state and city portals, scores which ones you can actually win, turns a 60-page solicitation into a compliance checklist, drafts the first version of the proposal, and tracks deadlines and invoices after you win. It's a one-time build, typically $5,000 to $8,000, plus a small yearly fee for the AI usage. It's yours, not a monthly subscription. Would it be crazy to take 20 minutes to see what it would look like for your team?"

FAQ:

Question	Answer
"Is this like GovWin/Deltek?"	"Those are subscription databases built for everyone. This is a system built for *your* team and workflow: it scores opportunities against your codes and certifications and goes all the way through proposal drafting and post-award tracking. Some clients keep their data service and use this for the work that comes after finding the bid."
"Why not just a subscription?"	"You own the build. You pay once for the system and a small yearly AI usage fee, not a monthly seat fee forever."
"Does it write the whole proposal?"	"It drafts and organizes; your team reviews and finalizes. You're always in control of what's submitted."
"Does it guarantee we win?"	"No. Nothing can. It helps you bid on the right things and not miss requirements or deadlines."
"How long to build?"	"[TIMELINE], confirmed after a scoping call."
"What's the yearly fee?"	"[TOKEN_FEE]. It covers the AI processing; it's minimal compared to the build."

Do NOT promise: win rates, "approved by the government," access to non-public data, or a fixed delivery date.

Quiz (C2):

1. In SMM, who is the ad budget paid to? *(Meta, directly by the client)*
2. What's in one SMM month? *(6 posts, 3 reels, ad strategy)*
3. Is the contract-management build a subscription? *(No: a custom one-time build of $5–8k + yearly AI token fee)*
4. Name 3 things the contract-management system does. *(any 3 of the 8)*
5. Which prospect is the weakest SEO fit: HVAC, duct cleaning, pure-federal depot maintenance? *(depot maintenance)*
6. Explain AI automation in one sentence a contractor would understand.
7. What should you never promise about SEO? *(rankings/#1/timelines)*

Flashcards (C2): Revamp ↔ redesign of an existing site · Dynamic site ↔ has an admin panel to edit content · Compliance matrix ↔ checklist mapping every solicitation requirement to the proposal · Compliance gate ↔ NAICS/set-aside/certification eligibility check · AI receptionist ↔ answers calls 24/7, takes messages, books appointments · Bytescon framing ↔ "we build you your own system".

C3.1 The dial-then-look workflow & 30-second website scan

Rule: do **not** research before dialing. Most dials don't connect: Gong's 300M-call analysis reports average reps connecting on 5.4% of dials (13.3% for top reps). Pre-call research mostly gets wasted on voicemails.

Workflow (each dial):

1. **Glance (≤10 s):** read Firm Name + Capabilities Narrative + City/State in the list. Form a one-line guess: "Guard company, Texas, probably also does private sites."
2. **Dial.**
3. **While it rings:** click the Website URL (or paste it in a second tab). If blank, note "NO SITE."
4. **Scan for up to 30 seconds** (checklist below) while ringing / during the gatekeeper / during the opener.
5. **If voicemail:** use the voicemail script (D.5), log `VM`, plus one website observation in notes (helps the next call and follow-up email).
6. **If connected:** use **one** live observation in your reason-for-call or as a discovery question, phrased as a question, not as criticism.

30-second website scan checklist → what each lets you say

#	Check (where to look)	If you see...	What you can say (as a question)
			"I noticed Chrome flags your site as 'Not

1	Address bar	"Not secure" / no padlock	secure.' Has anyone mentioned that to you?"
2	Footer	© year ≤ 2021	"Looks like the site was last refreshed a few years back. Is that on your list?"
3	Narrow the browser / phone	Text tiny, menu broken on mobile	"On a phone your site's a bit hard to read. Do primes ever look you up on mobile?"
4	Menu/homepage	No capability statement, no NAICS/CAGE/certifications	"When a CO or prime looks you up, where do they find your capability statement?"
5	Header/footer	No social icons, or last post years ago	"Do you do anything on social, or is that not a priority?"
6	Menu	No blog/news/projects	"Is the site bringing in any private-sector work right now?"
7	Overall look	Generic template, stock photos, "Lorem ipsum", broken images	"Did someone build it for you, or was it a template?"
8	Load time	>3 seconds, pop-up errors	"It took a while to load on my end. Has that come up before?"
9	Contact page	No form, no click-to-call, only a Gmail address	"How do new customers usually reach you, phone or email?"
10	URL blank or dead	No site / domain parked	"I couldn't find a website for you. Is that intentional, or just hasn't been a priority?"

Tone rule: observations are **questions, never insults.** "Your site is bad" loses the call. "I noticed X; is that on your radar?" opens it.

C3.2 Classification rubric & decision tree

Step 1: Government mix (ask or infer). Pure-federal (CLS, depot maintenance, specialized defense supply) vs. mixed (guards, HVAC, electrical, integrators, labs).

Step 2: Score each service (add points from the SAM row + 30-second scan + first answers):

Signal	Website (new)	Revamp	SEO	SMM	Automation/Custom	Contract-mgmt build
No URL / dead site	**+5**					
No SSL, © ≤2021, not mobile, template look		**+4**	+1			
No capability						

statement/NAICS on site	+1	**+2**				+1
Serves private/local customers (HVAC, duct, electrical, guards, integrator, lab)			**+3**	+2	+1	
No blog/thin content but decent site			**+2**			
No social links or posts >1 yr old				**+2**		
Hiring constantly (guards, techs)				**+2**	+1	
Mentions missed calls, scheduling, spreadsheets, dispatch, inventory					**+4**	
Field crews/shifts/sample intake/quotes volume					**+2**	
Bids regularly / many agencies, vehicles, certifications listed						**+4**
Has 1–3 BD/proposal staff or owner writes proposals						**+2**
Pure-federal	+1	+1	**−3**	**−2**		+2

Step 3: Lead with the top score; keep the runner-up as the "and also" in the meeting. Tie-breaker: lead with whatever the prospect *said* hurts. If nothing yet, lead with the most visible issue (no site > outdated site > invisible on Google).

Decision tree (quick version):

```
Is there a working website?
├─ NO → Lead: NEW WEBSITE (+ capability statement page)
└─ YES → Is it outdated (no SSL / old © / not mobile / no cap statement)?
        ├─ YES → Lead: REVAMP
        └─ NO → Do they bid on many solicitations / have a BD function?
                ├─ YES → Lead: CONTRACT-MGMT BUILD
                └─ NO → Do they have private/local customers?
                        ├─ YES → Missed calls/scheduling pain? → AUTOMATION
```

```
│        else invisible on Google? → SEO
│        else inactive socials/hiring? → SMM
└─ NO (pure federal) → website polish / capability page,
         or AUTOMATION if ops pain, else polite exit
```

C3.3 Worked examples (nine prospect types)

Prospect	Look for on site	Lead with	2-sentence opening hook
Aerospace maintenance contractor ("Aircraft CLS, depot maintenance")	Capability statement, CAGE/NAICS, past performance, modern look; bid volume	**Revamp** (if dated) or **Contract-mgmt build** (if site is solid and they bid a lot)	"I work with maintenance contractors who support DoD programs, and the common headache we hear is chasing solicitations and building compliance checklists by hand. I'm curious how your team handles that today."
Lockers/shelving supplier	Online catalog? Quote form? Product photos? Mobile?	**Revamp/new website** (catalog + quote form); SEO if they sell commercially	"When a facility manager at a base or a school searches for lockers and shelving, they usually want to see products and request a quote on the spot. I was just on your site, and I'm curious: are quote requests coming through it today?"
Forensic/environmental lab	Accreditations shown? Sample submission info? Client portal?	**Automation/custom** (sample intake, client portal) or **SEO** if commercial clients	"Labs we talk to often lose hours to sample intake, chain-of-custody paperwork and 'is my report ready?' calls. How are you handling that today: spreadsheets, a LIMS, something else?"
Security guard company ("ARMED AND UNARMED SECURITY OFFICERS")	Hiring page? Social links? Commercial clients?	**SMM** (recruiting + visibility) or **SEO** (commercial clients); **automation** for shift alerts	"Most guard companies we speak with tell me their two biggest headaches are finding reliable officers and winning private clients beyond government work. Which one's bigger for you right now?"
			"When a GC or property manager in [city] searches

Electrical contractor	Project gallery, service area pages, reviews, mobile	**SEO** (commercial/residential leads) or **revamp** if dated	for a commercial electrician, the top three names get most of the calls. I was looking at your site while we connected. Do you know where you show up today?"
Industrial fastener supplier	Line card/catalog, RFQ form, ordering	**Revamp** (catalog/RFQ) or **automation** (quote handling, inventory)	"Distributors your size tell us quote requests come in by phone, email and fax, and some fall through the cracks. How are you keeping track of RFQs today?"
Radio/tower communications company	Projects, certifications, coverage area, last update	**Revamp** + capability page; **custom system** for project tracking	"Tower and two-way radio firms often win work from primes who check their site before calling back. I'm on yours now. Is it showing the projects you've actually done?"
HVAC/duct cleaning	Reviews, booking button, service pages, Google presence, socials	**SEO** + **AI receptionist** (missed calls)	"In HVAC and duct cleaning, the company that answers first usually gets the job. What happens today when someone calls you at 7 p.m. or on a Saturday?"
Security systems integrator (CCTV/access control)	Case studies, certifications (manufacturer), service contracts	**SEO/revamp** for commercial leads; **CRM** for service contracts; **contract-mgmt** if they bid often	"Integrators we work with juggle bids, installs and service contracts all at once. Where's the bigger bottleneck for you right now: getting new projects or keeping track of the ones you have?"

Classification drill (for PRODUCT_CERT): the system shows 10 real SAM.gov rows plus a screenshot or scan result. The rep picks the lead service and one reason. Pass = 8/10 matching the rubric.

Quiz (C3):

1. When do you open the prospect's website? *(While it's ringing/during the opener, never before dialing)*
2. You see "Not secure" and © 2017. Which service? *(Revamp)*
3. A pure-federal depot-maintenance firm with a modern site that bids monthly. Which service? *(Contract-mgmt build)*
4. Rephrase "Your site looks old" as a question. *("Looks like the site was last refreshed a few years*

back. Is that on your list?")

Part D — Track 2: Sales Coaching Curriculum

D.1 Mindset & rejection

Key ideas

- **It's a numbers game first, a skill game second.** Alex Hormozi's "Rule of 100" from *$100M Leads* says to do 100 primary outreach actions a day (e.g., 100 cold calls) for 100 days. Substack manassaloi Volume creates the reps (practice) that build skill.
- **Know the math so "no" doesn't hurt.** In Gong's 300M+ call analysis, the average rep connected on 5.4% of dials and booked a meeting on 4.6% of connects (top reps: 13.3% and 16.7%). principledpitch +2 In other words, an average rep hears "no" or gets no answer on the vast majority of dials. That's normal.
- **Detach from the outcome.** Josh Braun teaches that you're "sorting, not selling": it's fine if they want to talk and fine if they don't. joshbraun Pressure shows in your voice. Detachment lowers resistance.
- **"Not interested" is about your message, not you.** Braun's point: a prospect's rejection says nothing about your self-worth. You control who you call, how many, what you say and how you say it.

Daily mindset routine: a 2-minute reset after each call block. Say out loud: "I'm not for everyone. I'm looking for the few who need us." Track *activities* (dials, conversations) as wins, not just meetings.

D.2 Call anatomy (the structure every call follows)

Stage	Time	Goal
1. Opener	0–10 s	Name, company, human moment ("How have you been?")
2. Reason for call	10–25 s	One sentence why *them*: industry problem + live website observation
3. Permission/interest check	25–35 s	"Is that something on your radar, or not really?"
4. Problem questions	1–3 min	2–4 questions (D.7)
5. Bridge/pitch	30 s	Connect their answer to one service
6. Book the meeting	1 min	Specific day/time, calendar invite, who attends
7. Confirm & close	30 s	Recap, next step, thank you

What the data says:

- Gong's analysis found that successful cold calls ran longer than unsuccessful ones, averaging 5:50 vs 3:14. scienceofpeople hubspot
- On successful cold calls, reps talked about **55%** of the time. That is the opposite of the usual "listen more" advice for discovery calls. gong callingagency On a cold call you carry the conversation to *earn the meeting*. Full discovery happens in the meeting.
- Gong reports that successful calls used "our/we" collaborative language more often ("our" to "my" ratio 55% higher). gong

How this fits Hormozi's "the more you say, the less you sell": keep your *pitch* short, one or two sentences, then ask a question. You can carry the conversation without monologuing about features. Braun's guidance: don't talk more than about 15 seconds without handing the conversation back with a question.

D.3 Openers (word-for-word, adapted for government contractors)

Data to know:

- In Gong's 2018 analysis of 90,380 cold calls, "How have you been?" had a 10.01% success rate vs. a 1.5% baseline (6.6x). Stating "the reason for my call is..." lifted success 2.1x. "Did I catch you at a bad time?" dropped to 0.9% (40% less likely to book). gong +2
- Gong's later 300M-call guide, as summarized by SalesHive, puts "Did I catch you at a bad time?" at 2.15%, a permission-based opener at 11.18%, and "Heard the name tossed around?" at 11.24%. saleshive
- *Caveats:* these are correlations from vendor data, not controlled experiments. Some trainers (e.g., 30 Minutes to President's Club) prefer permission-based or "heard the name" openers over "how's it going." podtail **Test 2–3 openers per rep and let your own data decide (track opener used in the CRM).**

Opener 1 — Gong "How have you been?"

> "Hi [First name], it's [Your name] with Bytes Platform. How have you been?"
> *(pause, let them answer, respond like a human)*
> "The reason for my call is: we work with [security/HVAC/aerospace] contractors who are registered on SAM.gov, and I was just looking at your website. Quick question: is it bringing you any work right now, or is it more of a business card?"

Opener 2 — Permission-based (honest cold call)

> "Hi [First name], [Your name] from Bytes Platform. I'll be honest: this is a cold call. Can I take 30 seconds to tell you why I called, and then you can tell me if it's worth a conversation?"

Opener 3 — "Heard the name tossed around?" *(only use while it's honest. If they say no, just move on)*

> "Hi [First name], [Your name] with Bytes Platform. Have you heard our name tossed around?"
> *"No."* → "No worries, we're the team that builds websites and bid-management systems for

> government contractors. The reason I'm calling..."

Opener 4 — Chris Voss "no-oriented" opener

> "Hi [First name], [Your name] from Bytes Platform. Would it be a terrible idea if I took 30 seconds to explain why I called?"
> *(Voss's method frames questions so "no" is the safe answer, which lowers defensiveness. "No, go ahead" is the typical reply.)*
> **Do not use "Is now a bad time?"** Even though Voss mentions it as a no-oriented question, Gong's cold-call data shows the "bad time" wording performs worst on cold calls.

Opener 5 — Josh Braun "poke the bear" (problem-first)

> "Hi [First name], [Your name] with Bytes Platform. The reason for my call: a lot of small contractors we talk to are finding solicitations late, sometimes a week before they're due, because they're checking SAM.gov and state portals by hand. Just out of curiosity, how are you finding new bids today?"
> *(Braun: describe a common problem, then ask a neutral question about how they do it today, with no agenda.)*

Opener 6 — Live-observation opener (uses the dial-then-look scan)

> "Hi [First name], it's [Your name] with Bytes Platform. How have you been? ... The reason I'm calling: I'm on your website right now while we talk, and I noticed it doesn't have your capability statement or NAICS codes on it. When a prime or contracting officer looks you up, where do they usually find that?"

Opener 7 — Pattern interrupt (light humor, for experienced reps only)

> "Hi [First name], [Your name] here. You're probably going to want to hang up on me because this is a cold call... can I have 30 seconds, and then you decide?"

Tonality for all openers: calm, slower than normal, a smile in your voice, a downward tone at the end of statements. Avoid sounding nervous with rising "uptones."

D.4 Gatekeeper scripts

Principles: be polite, brief and confident. Use the owner's first name. Treat the gatekeeper as an ally, not a wall.

- **Standard:** "Hi, this is [Name] with Bytes Platform. Is [First name] around?"
- **"What's this regarding?"** → "It's about how [Company] shows up when primes and contracting officers look you up online. Is [First name] the right person for that, or is someone else in charge of the website and bids?"
- **"Is this a sales call?"** → "It is. I'll be quick. I'm trying to find out who handles your website and bid process. Would that be [First name], or someone else?"
- **"He's busy."** → "No problem. When's usually a good time to catch them, early morning or end of day?" *(log CB with time)*
- **"Send an email."** → "Happy to. What's the best email for [First name]? And so I send something

useful: is the website or the bid process the bigger priority right now?"

- **Make them a referral source:** "You probably know this better than anyone: who updates the website there?"

D.5 Voicemail policy & scripts

Policy:

- Gong's 300M-call guide advises leaving 1–2 voicemails to boost email replies and moving on after about 5 dials, because connect rates fall after that. gong
- Gong Engage data also reports that leaving a voicemail doubles the likelihood of an email reply. gong
- **Rule: leave a voicemail on dial #1 and dial #3 (or #4) only, each followed by an email within 5 minutes.** Other attempts: hang up and log `VM-NL` (no message).
- **Never use pre-recorded "voicemail drops" to cell phones** (Part F).

Voicemail #1 (≤20 seconds, points to email)

> "Hi [First name], [Your name] with Bytes Platform. I was looking at [Company]'s website and had a quick idea about [your capability statement / how you show up online / finding bids faster]. I'll send you a short email with the subject line '[Company] – quick idea.' My number is [number]. Again, [Your name], [number]."

Voicemail #2 (different angle)

> "Hi [First name], [Your name] again from Bytes Platform. I sent a note about [observation]. Other [industry] contractors told us [pain] was costing them [time/bids]. If that's not an issue for you, just reply 'no' to my email and I'll close the loop. [number]."

D.6 Callback handling

- **Inbound callback ("You called me?"):** "Thanks for calling back, [First name]. It's [Name] with Bytes Platform. I left a message about [observation]. Do you have two minutes, or should we set a better time?"
- **Scheduled callback:** call **at the exact minute promised.** Open with: "Hi [First name], [Name] from Bytes Platform. You asked me to call back today at 10 about [topic]."
- **Log every callback** with date/time/time zone and a reminder.

D.7 Problem-identification question bank (by service)

Pull from the frameworks:

- **Sandler pain funnel:** "Tell me more about that…", "Can you give me an example?", "How long has that been a problem?", "What have you tried?", "How much has it cost you?", "How do you feel about it?"
- **NEPQ:** connecting → situation → problem awareness → solution awareness → consequence → commitment questions.
- **SPIN:** Situation → Problem → Implication → Need-payoff. NEPQ's middle stages map closely to

SPIN's.

Service	Situation	Problem	Consequence / implication
Website/revamp	"Who manages your site today?"	"Does it bring in any work?" / "Can primes find your capability statement on it?"	"If a prime checks you out and the site looks outdated, what do you think that does to their first impression?"
SEO	"Where do private customers find you now?"	"When someone searches [service] in [city], where do you show up?"	"If competitors get those calls instead, what's that worth over a year?"
SMM	"Do you post anywhere now?"	"How are you recruiting [officers/techs]?"	"What does an unfilled shift or job cost you?"
Automation	"What happens to a call after hours?"	"What's the most repetitive task in your office?"	"How many hours a week does that take? What would you do with that time back?"
Contract-mgmt	"How do you find solicitations today? How many bids a month?"	"Who reads the solicitation and builds the checklist? How long does that take?"	"Have you ever missed a deadline or been knocked out on a compliance detail? What did that cost?"

Rule: ask **2–4 questions max** on a cold call. Gong's guidance is to avoid long discovery on cold calls; save it for the meeting.

D.8 Bridging to the pitch

Formula: **Label → Link → Light pitch → Question.**

> "It sounds like bids are coming in late and the checklist is built by hand *(label)*. That's exactly the piece we automate *(link)*: we build contractors their own system that pulls opportunities from SAM.gov and state portals and turns the solicitation into a compliance checklist *(light pitch)*. Would it be worth 20 minutes to see what that would look like for your team? *(question)*"

This mirrors Hormozi's CLOSER sequence (Clarify, Label, Overview past pain, Sell the vacation not the plane flight, Explain away concerns, Reinforce the decision). On a cold call you only do a light C-L-S to earn the meeting.

D.9 Booking the meeting

- **Suggest two specific times:** "Does Wednesday at 10 or Thursday at 2 work better, your time?" (offer 2 options, not "when are you free?")
- **Make it concrete:** "It's 20 minutes with [specialist]. They'll look at your site and your bid process and show you 2–3 ideas. If it's not a fit, they'll tell you."
- **Sandler upfront contract for the meeting:** "At the end of the 20 minutes, if it's not useful, is it fair

for you to tell us no? And if it is, we'll agree on a next step." Agreeing up front on time, agenda and what each outcome means (including "no") reduces stalls later.

- Gong advises setting the next step *during* the call rather than leaving it vague ("Do you have your calendar handy?").

D.10 Closing & confirming

1. **Recap:** "So: Thursday at 2 Eastern, 20 minutes, you and [partner?], and we'll look at [site/bids]."
2. **Send the invite while on the phone:** "I just sent the invite. Can you see it?" (reduces no-shows)
3. **Get a reason to show:** "What's the one thing you want to get out of that call?" (commitment and consistency)
4. **Confirm the right people:** "Anyone else who should be there, a partner or office manager?"
5. **Reinforce:** "Great, I think you'll get something useful out of it either way."
6. **Confirmation cadence:** email immediately, SMS reminder 24h before *only if they agreed to texts*, and a call or email 1h before.

D.11 Objection-handling framework (A-C-I-R-R)

1. **Acknowledge** ("That's fair..." / Voss label: "It sounds like you've been burned by agencies before.")
2. **Clarify** ("When you say not interested, is it the timing or the idea itself?")
3. **Isolate** ("Other than [X], is there anything else that would stop you from taking a quick look?")
4. **Respond** (short answer, story or reframe)
5. **Re-ask** (return to a small next step)

Gong's breakdown of cold-call objections: 49.5% are dismissive brush-offs (e.g., "not interested"), 42.6% are situational (budget, timing, fit) and 7.9% cite an existing solution. The top five make up 74% of all objections. usecarly **Master the top five first.**

D.12 Full objection library

#	Objection	Why they say it	Principle	Responses (pick one)
1	**"Not interested."**	Reflex; doesn't know what you do yet	Pattern interrupt, labeling, curiosity	(a) "Totally fair, you don't know what I do yet. Can I ask one quick question, and if it's not relevant I'll let you go?" (b) "Makes sense. Most contractors I call say that. Is it because the website's already handled, or because bids aren't a priority right now?" (c) Braun: "No problem. Just out of curiosity, how are you finding new solicitations today?"
				(a) "Happy to. So it's not spam,

2	**"Send me an email."**	Polite exit	Commitment, clarify	what should it focus on: the website or the bid process?" (b) "Will do. If it makes sense, would you be against a 15-minute look on Thursday so it's not just another email?"
3	**"We already have a website / a guy / an agency."**	Status quo; loyalty	Contrast, no-oriented question	(a) "Great, so you're covered. Is the site bringing in work, or mostly a business card?" (b) "Good to hear. When did they last update it? I noticed [observation]." (c) "Would it be crazy to get a second opinion, free, just to compare?"
4	**"No budget."**	Real or brush-off; doesn't see ROI	Isolate, reframe cost of inaction	(a) "Understood. If budget weren't an issue, would this be worth looking at?" (b) "Fair. Most clients didn't budget for it either; they looked when they saw what the outdated site was costing them. Would a 15-minute look hurt?" (c) For the contract-mgmt build: "It's a one-time build, not a subscription. One contract won usually covers it many times over." *(no win guarantees)*
5	**"Call me later / I'm busy."**	Timing; could be real	Specific commitment	(a) "Of course. Is tomorrow at 9 or 4 better?" (b) "No problem. 20 seconds now so I know if it's even worth calling back?"
6	**"How did you get my number?"**	Privacy concern	Transparency, authority	"Fair question. Your business is registered on SAM.gov, which lists contact info for contractors. We reach out to registered contractors in [industry] because we build tools for exactly that market."
7	**"We don't need SEO."**	Pure-federal, or doesn't understand	Agree & isolate	(a) "You might be right. Is your work 100% government, or do you do private jobs too?" (b) If pure-federal: "Then SEO isn't the priority. Where do primes see your capability statement?" (switch services)

8	**"We don't do social media."**	Thinks it's for consumers	Reframe purpose	(a) "Most contractors don't. Are you hiring right now? Many guard and trade companies use it mainly for recruiting." (b) "Fair. When a prime checks you out and finds a page last posted in 2019, does that matter? Maybe not, just curious."
9	**"We get all our work from government; we don't need marketing."**	True for pure-federal	Agreement, relevance shift	"That makes sense, and that's why I'm not calling about ads. When a CO or prime looks you up during market research, what do they find? And how are you finding the solicitations to begin with?"
10	**"We're too small."**	Thinks it's expensive/complex	Social proof (real only), scale down	"Most of who we work with are small, often owner-run. That's exactly why the system is built just for your team instead of an enterprise platform."
11	**"Is this a sales call?"**	Testing honesty	Honesty disarms	"It is. Want me to tell you in 20 seconds why I called, and you can hang up if it's not relevant?"
12	**"We don't trust overseas/agencies."**	Bad past experience	Labeling, accusation audit (Voss)	"It sounds like you've been burned before. You're probably thinking we'll take a deposit and disappear. What happened last time? … [Then: process, milestones, ownership, references, per company policy.]" *(Never misrepresent where the team is located.)*
13	**"We already use a bid service / GovWin / Deltek."**	Has a data source	Complement, not replace	"Good, you've got the finding part covered. What happens after you find a bid: who builds the compliance matrix and drafts the proposal? That's the part we build for your team."
				(a) Website/SEO/SMM: "It depends on scope. Packages start at [PRICE]. The 20-minute call gets you an exact number." (b) Contract-mgmt: "It's a one-time build, typically $5,000–

14	**"What does it cost?"**	Interest or screening	Anchoring, honesty	$8,000, plus a small yearly AI usage fee. Not a subscription." (Gong Labs' 2020 analysis of 11,331 opportunities found win rates were 10% higher when pricing was discussed on the first call, so don't dodge price.)
15	**"I need to talk to my partner."**	Real shared decision or stall	Include decision-maker	"Makes sense. Would it be easier if they joined the 20-minute call, so you don't have to relay everything? Thursday at 2 work for both?"
16	**"Remove me from your list / don't call again."**	Clear request	**Compliance; no rebuttal**	"Understood, I'll remove you right now. Sorry for the interruption, have a good day." → log `DNC` immediately (Part F). **Never argue.**
17	**"We tried an agency/website before and it didn't work."**	Past pain	NEPQ solution-awareness	"What did they do, and what didn't work? … So if it were done right, what would 'working' look like for you?"

D.13 Psychology principles: do this / don't do this

Principle	Do this	Don't do this
Reciprocity	Give a free, specific observation ("your site shows 'Not secure', here's why that matters")	Fake "free gifts" with strings attached
Social proof	"Other [guard companies] tell us…" *(only true statements)*	Invent clients or numbers
Authority	Know NAICS, set-asides and capability statements cold	Claim government affiliation
Scarcity/urgency (ethical)	Real deadlines ("the solicitation you mentioned closes on the 15th")	Fake "price ends today"
Loss aversion	"What does a missed after-hours call cost you?"	Fear-mongering
Labeling (Voss)	"It sounds like you're stretched thin." "It seems like bids are the priority."	"I hear you saying…" (Voss avoids "I hear…" because it shifts focus to you)

Mirroring (Voss)	Repeat their last 1–3 words as a question: "...too many bids?" then **pause 4 seconds**	Parrot everything
Tonality/pace	Calm, slower "late-night FM DJ voice," downward inflection on statements	Fast, high-pitched, uptone on everything
Silence	Ask, then stop talking	Fill every gap
Assumptive language	"When you see the mockup..." / "Wednesday or Thursday?"	"Would you maybe possibly be interested..."
"Because" justification	"I'm calling *because* you're registered on SAM.gov in [industry]..."	No reason given
Contrast/anchoring	Compare the one-time build to a year of subscription fees, or to one lost contract	Misleading comparisons
Commitment & consistency	Small yeses ("Fair to say the site could be better?") lead to the meeting	Trick questions
Name usage	Use their first name 2–3 times	Every sentence
Calibrated questions (Voss)	"How are you finding bids today?" "What would make this worth your time?"	"Why...?" (sounds accusatory)
Detachment (Braun)	"If it's not a fit, no problem at all."	Desperation, arguing

D.14 Tonality & pacing drills (daily, 5 minutes)

1. **Downward inflection:** read the opener 5 times, ending every statement on a lower note. Record and replay.
2. **Slow-down:** read the reason-for-call at about 140 words/minute (the AI or the trainer times you).
3. **Mirror-and-pause:** partner says a sentence; you mirror the last 3 words and count 4 seconds silently.
4. **Smile test:** read the same line with and without smiling; the trainer guesses which.
5. **Belfort-style certainty:** Jordan Belfort's "Straight Line" system stresses tone that conveys certainty and control. Practice saying the price ("five to eight thousand, one-time") with zero hesitation.

D.15 Follow-up cadence (email + call + SMS)

Gong reports that cold calling nearly doubles cold-email reply rates (3.44% vs 1.81%) even when the call doesn't connect, so calls and emails should run together. gong marketintelligencetools

Day	Action
1	Call #1 (VM #1) + email #1 ("[Company] – quick idea" with one site observation)

3	Call #2 (no VM)
5	Call #3 (VM #2) + email #2 (different angle: bids or automation)
8	Call #4 (no VM)
12	Call #5 + email #3 (breakup, no-oriented: "Have you given up on improving [X]?")
30–60	Move to nurture; re-try with a new angle next quarter

SMS: only to prospects who **gave permission** during a call (e.g., meeting reminders). No cold texts (Part F).

D.16 CRM/notes discipline & disposition codes

Code	Meaning	Required notes
`VM`	Voicemail left	Observation used
`VM-NL`	Voicemail, no message	—
`NA`	No answer / rang out	—
`GK`	Spoke to gatekeeper	GK name, DM name, best time
`NI`	Not interested	Reason given + service pitched
`CB`	Callback scheduled	Date/time + time zone + topic
`BK`	Meeting booked	Date/time, attendees, pain, service, website notes
`WN`	Wrong number / bad data	—
`DNC`	Requested no further contact	Date/time, exact wording; suppress immediately
`NF`	Not a fit	Why

Rule: notes must be written **before the next dial**. Format: `Pain: … | Service: … | Site: … | Next: …` .

D.17 Daily routine & call blocks

Time (prospect local)	Block
8:30–9:00	Daily drill (5 min), flashcards, review callbacks
9:00–	

11:00	**Call block 1** (aim for 40–50 dials)
11:00–12:00	**Call block 2 (prime time)**: Gong's data shows the best cold-call success rates on Wednesday/Thursday between 11 a.m. and noon or 4–5 p.m., the prospect's time
12:00–1:00	Lunch; follow-up emails
1:00–2:00	Roleplay/coaching, call review
2:00–4:00	Call block 3 (time zones further west)
4:00–5:00	**Call block 4 (prime time)**
5:00–5:15	Log, plan tomorrow's list

Use time zones: dial East Coast in your morning and West Coast later. Wednesday/Thursday are generally the strongest days. Monday mornings and Friday afternoons are typically weaker. Sources disagree on Tuesday vs. Wednesday, so trust your own data after week 4. zoominfo salesmotion

D.18 KPI targets, weeks 1–8 (starting assumptions; recalibrate)

For reference, The Bridge Group's 2025 SDR survey reports a median of 112 activities/day (44 phone), 4.1 quality conversations/day and a median quota of 10 held meetings per month (down 40% since 2018). The survey covered 351 B2B companies, 83% of them SaaS. Its phone-centric teams averaged 56 dials and 4.6 quality conversations per day, which is closer to our phone-heavy model.

Week	Phase	Dials/day	Conversations/day	Meetings booked/week	Show rate	Scorecard avg
1	Training (Track 1)	0 (roleplay only)	—	—	—	Roleplay ≥50
2	Training (Track 2) + cert	0–20 shadow/supervised	—	—	—	Roleplay ≥70
3	Certified, supervised	60	3–4	1	≥60%	≥60
4	Ramp 50%	80	4–5	1–2	≥65%	≥65
5–6	Ramp 75%	100	5–6	2–3	≥70%	≥70
7–8	Toward full	100–120	6+	3–4	≥75%	≥75

Math check: at Gong's average 5.4% connect rate, 100 dials ≈ 5 conversations. At the average 4.6% meeting-per-connect rate, that is about 1 meeting per 4 days for an average rep. gong Top-quartile rates (13.3% / 16.7%) give about 2 per day. Small-contractor owners may pick up more often than SaaS

buyers. Track and adjust.

D.19 The 100-point call scorecard (shared by the AI and the sales lead)

#	Criterion	Points	Full marks when…
1	Opener	10	Name + company + human moment; calm tone; no "bad time?"
2	Reason for call	10	Clear, specific to their industry; uses a live observation
3	Tonality & pace	10	Calm, confident, downward inflection, not rushed
4	Problem questions	15	2–4 relevant questions; at least one consequence question
5	Listening	10	Mirrors/labels; no interrupting; builds on their words
6	Classification & bridge	10	Leads with the right service per rubric; pitch ≤2 sentences tied to their pain
7	Objection handling	15	Acknowledge → clarify → isolate → respond → re-ask; stays calm
8	Next step	10	Specific day/time offered; invite sent; attendees confirmed
9	Accuracy & compliance	5	No false promises; honors DNC; recording disclosure if required
10	Notes & disposition	5	Correct code; notes in the required format
Total		**100**	Pass ≥70; Excellent ≥85

Automatic fails (score capped at 40): arguing after a DNC request, promising rankings/wins, misrepresenting the company, or pitching the contract-management build as a subscription.

D.20 Sample call transcripts

Transcript 1: Good call (HVAC/duct cleaning, mixed commercial/government)

> **Rep:** Hi Mike, it's Sara with Bytes Platform. How have you been?
> **Mike:** Uh… fine. Do I know you?
> **Rep:** You don't, this is a cold call, so I'll be quick. The reason I'm calling: we work with HVAC and duct-cleaning companies on SAM.gov, and I'm actually on your website right now. I noticed there's no way to book or request a quote after hours. Quick question: what happens when someone calls you at 7 p.m.?
> **Mike:** Goes to voicemail. Half of them never leave one.
> **Rep:** Half of them never leave one?
> **Mike:** Yeah, they just call the next guy.
> **Rep:** It sounds like those after-hours calls are leaking straight to competitors. Roughly how many a

week, would you guess?
Mike: Maybe ten, more in summer.
Rep: And if even a few of those were jobs, what's an average job worth to you?
Mike: Four, five hundred for a duct cleaning. More for HVAC.
Rep: That adds up. We build an AI receptionist that answers those calls, asks what they need, books the appointment and texts you a summary. Would it be worth 20 minutes with our specialist to see how it would work for your business? Wednesday at 10 or Thursday at 2?
Mike: Thursday at 2 works.
Rep: Great. Thursday at 2 Eastern, 20 minutes. Anyone else who should join, office manager?
Mike: My wife does the books, I'll bring her.
Rep: Perfect. I've just sent the invite to mike@... Can you see it? ... And what's the one thing you'd want to get out of the call?
Mike: Whether it sounds like a robot.
Rep: Fair. We'll play you a sample call. Talk Thursday, Mike.
(Score ~88: strong opener, live observation, mirror, label, consequence question, two-option close, invite sent.)

Transcript 2: Objections handled (aerospace maintenance contractor, pure-federal)

Rep: Hi Linda, it's Omar with Bytes Platform. How have you been?
Linda: Busy. What's this about?
Rep: I'll be quick. We work with maintenance contractors supporting DoD programs. The reason for my call: teams your size tell us they're tracking solicitations and building compliance checklists by hand. How are you finding new bids today?
Linda: We have GovWin. We don't need anything.
Rep: Good, so the finding part's covered. After GovWin flags something, who reads the solicitation and builds the compliance matrix?
Linda: Me. And one other person.
Rep: Just the two of you. How long does a typical one take?
Linda: A few days for a big one. We passed on two last quarter because we didn't have time.
Rep: It sounds like you're leaving bids on the table because of bandwidth, not capability.
Linda: Pretty much. But we don't have budget for another subscription.
Rep: That's fair, and it's not a subscription. We build your team its own system: it takes the solicitation, extracts the requirements into a compliance matrix, drafts the first version of the proposal and tracks deadlines. It's a one-time build, typically $5,000 to $8,000, plus a small yearly fee for the AI usage. Other than budget, is there anything else that would stop you from taking a look?
Linda: I'd need my partner to see it.
Rep: Makes sense. Would it be easier if he joined the call so you don't have to relay it? Is Tuesday at 11 or Wednesday at 3 better for both of you?
Linda: Wednesday at 3.
Rep: Done. Wednesday at 3 Central, 30 minutes. I'll send the invite to both of you. What's his email?
(Score ~85: handled the existing-solution, budget and partner objections with A-C-I-R-R; correct "not a subscription" framing.)

Transcript 3: Polite no (lockers/shelving supplier)

> **Rep:** Hi Tom, it's Jay with Bytes Platform. How have you been?
> **Tom:** Fine, what's up?
> **Rep:** The reason I'm calling: I'm on your site right now, and I didn't see a product catalog or quote form. When a base facility manager wants lockers, how do they usually reach you?
> **Tom:** Honestly, 90% comes through two distributors. We don't sell direct.
> **Rep:** Ah, so the distributors are the storefront.
> **Tom:** Right. The website barely matters for us.
> **Rep:** That makes sense. Is there any part of the business where you're doing things by hand, quotes, inventory, anything?
> **Tom:** No, the distributors handle all that. We're fine.
> **Rep:** Got it, Tom. Sounds like you're well set up. I won't take more of your time. Would it be OK if I checked back in six months, in case anything changes?
> **Tom:** Sure.
> **Rep:** Thanks, Tom. Have a good one.
> *(Score ~75: correct, detached exit; logged `NF` with reason "sells via distributors," nurture in 6 months. Detaching is a success, not a failure.)*

D.21 Role-play scenarios (load into `roleplay_scenarios`)

1. **Friendly owner, no website** (security guard company, TX). Objection: "How much?"
2. **Busy owner, outdated site** (electrical contractor, FL). Objections: "Call me later," "We have a guy."
3. **Skeptical BD manager** (aerospace CLS, OK). Objections: "We use GovWin," "No budget," "Need to talk to partner."
4. **Gatekeeper wall** (integrator, CA). Office manager asks "What's this regarding?" and "Send an email."
5. **Burned before** (HVAC, GA). Objection: "Agencies took our money."
6. **Pure-federal, no fit** (fasteners via distributors). Goal: graceful exit + correct disposition.
7. **DNC request** (any). Pass only if the rep complies instantly with no rebuttal.
8. **Lab owner** (environmental lab, NJ). Pain: sample intake chaos → automation pitch.

D.22 Track 2 quiz samples & flashcards

Quiz:

1. Per Gong, which opener performed worst? *("Did I catch you at a bad time?")*
2. What lifts success 2.1x in Gong's data? *(Stating the reason for the call)*
3. On successful cold calls, roughly what % of the time did reps talk? *(~55%)*
4. What are the five steps of A-C-I-R-R?
5. A prospect says "remove me from your list." What do you do? *(Comply immediately, log DNC, no rebuttal)*
6. How many voicemails per cadence? *(2)*
7. Give an example of a no-oriented question.

8. What's the Voss mirroring technique? *(Repeat the last 1–3 words as a question, then pause)*
9. Which days/times does Gong's data favor? *(Wed/Thu, 11–12 and 4–5 p.m. prospect's time)*

Flashcards: Poke the bear ↔ neutral question about how they do it today (Braun) · Upfront contract ↔ agree on time, agenda and acceptable outcomes, including "no" (Sandler) · Label ↔ "It sounds like…" · Calibrated question ↔ "How/What" open question · CLOSER ↔ Clarify, Label, Overview, Sell vacation, Explain concerns, Reinforce · Rule of 100 ↔ 100 outreach actions/day for 100 days · Disposition `CB` ↔ callback scheduled with time zone.

Part E — AI Enhancement Ideas (OpenAI-only, budget)

E.1 Model choice & pricing (checked October 22, 2026, from OpenAI's official pricing, model and deprecation pages)

Model	Input / cached / output per 1M tokens	Status	Use
gpt-6-luna	$0.10 / $0.01 / $0.50 (Batch: $0.05 / $0.25)	Current	**Default for everything text**
gpt-4.1-mini	$0.40 / $0.10 / $1.60	Deprecated, shutdown Jan 14, 2027 openai openai	Avoid for new builds
gpt-4o-mini	$0.15 / — / $0.60	Deprecated, shutdown Jan 14, 2027 openai openai (replacement: gpt-6-luna)	Avoid
gpt-5-mini	$0.25 / $0.025 / $2.00	Deprecated, shutdown Dec 11, 2026 openai openai	Avoid
o4-mini	$1.10 / — / $4.40	**Shutdown Oct 23, 2026**	Do not use
gpt-4o-mini-transcribe	≈ $0.003/min	Deprecated, shutdown Feb 26, 2027 openai openai	Cheapest transcription until then
whisper-1	$0.006/min	Deprecated, shutdown Feb 26, 2027 openai openai	Avoid
gpt-transcribe	≈ $0.0045/min	Current replacement openai openai	Transcription after Feb 2027
gpt-realtime-2.1-mini	Text $0.60/$0.06/$2.40; **Audio $10 / $0.30 cached / $20**	Current	Optional voice roleplay

Batch API: 50% cheaper for non-urgent jobs (OpenAI Batch guide). openai **Implication for the developer:** model IDs must be config values. The models the user originally named (4o-mini / 4.1-mini / o4-mini) are all being retired within 3 months.

Commercial comparison: dedicated AI roleplay platforms are much more expensive. A competitor (Outdoo) reports Hyperbound quoting about $70/user/month at 50 seats and Second Nature quoting $12,000 for 240 user-month credits (vendor-reported, not list prices). outdoo Building these features yourself is far cheaper per rep.

E.2 Cost summary per rep per month (gpt-6-luna; estimates)

Feature	Unit cost	Typical use	Per rep/month
Text roleplay	~$0.003/session	60 sessions	~$0.18
AI objection drills	~$0.0005/drill	200 drills	~$0.10
Call grading (transcribe + score, 5-min call)	~$0.017	40 calls	~$0.70
Pitch generator (cached/batched)	~$0.0001	2,000 leads	~$0.10–0.20
Website-scan summary	~$0.0005	1,000 sites (cached)	~$0.50
Quizzes/flashcards generation	one-time	—	<$0.05
Coach digest	~$0.002	4/month	<$0.01
Text/grading subtotal			**≈ $1.50–2.00**
Voice roleplay (realtime mini)	~$0.02–0.05/min	100 min	~$2–5

Suggested caps: **$5/rep/month without voice; $10 with voice.**

E.3 AI prospect roleplay (text first, voice optional)

- **Purpose:** unlimited realistic practice against personas built from *real* SAM.gov rows.
- **Prompt design outline:**
  - *System (static, cached):* "You are a busy owner of a small US government contractor. Stay in character. Answer in 1–3 short sentences. Raise objections from {objection_list} naturally. Don't agree to a meeting unless the rep (a) states a clear reason for calling, (b) asks at least one good problem question and (c) proposes a specific time. Never break character. Never give coaching."
  - *Persona block:* firm type from the Capabilities Narrative, state, size guess, government mix %, 2 hidden pains, mood (busy/friendly/skeptical), difficulty 1–5.

- *End:* a separate grading call with the rubric (E.5) using structured JSON output.

- **Model:** gpt-6-luna (text). Voice: gpt-realtime-2.1-mini.
- **Tokens/cost:** ~1,500-token static system prompt (cached), ~12 turns, ~25k total input (most cached) + ~2.5k output ≈ **$0.002–0.004/session**.
- **Voice cost:** audio at $10/1M input and $20/1M output. openai layer3labs A third-party breakdown (Forasoft, citing OpenAI docs) says audio is about 1 token per 100 ms for user audio and 1 per 50 ms for assistant audio. forasoft That works out to roughly $0.006/min of rep speech plus $0.024/min of AI speech before context growth: about **$0.02–0.05/min**, or **$0.20–0.50 per 10-minute session**. Cap at about 20 min/day.
- **Cost tricks:** keep the system prompt identical across reps so it caches. Trim history to the last 8 turns plus a summary. Use the "end-call" button to stop streaming silence (streamed silence is billed). layer3labs
- **No-key fallback:** a branching script: 8 prewritten personas, each with 3–4 decision points and canned replies.

E.4 AI objection drills

- **Purpose:** rapid-fire practice on the top objections (5 minutes, 10 objections).
- **Prompt outline:** "Give one objection from {library} in a realistic voice for {persona}. After the rep answers, score 0–10 on: acknowledge, clarify, isolate, respond, re-ask. Return JSON {score, missing_steps, better_line (≤25 words)}."
- **Model:** gpt-6-luna. **Cost:** ~600 in / 150 out ≈ $0.0001 per objection.
- **Tricks:** pre-generate 200 objection variants in one Batch job per quarter and only use the model for grading.
- **Fallback:** show the objection card. The rep self-rates against the model answer from D.12.

E.5 AI call grading against the 100-point rubric

- **Purpose:** score real recorded calls (with consent) and roleplays the same way the sales lead would. The lead then reviews only flagged calls.
- **Pipeline:** upload audio → (consent check) → transcribe (gpt-4o-mini-transcribe until Feb 2027, then gpt-transcribe) → speaker labeling heuristic → grade with the rubric JSON schema → store → queue for human review if the score is <60, >90, or the AI/human gap was >15 last time.
- **Prompt outline:** system = rubric (static, cached) + scoring rules + auto-fail rules. User = transcript. Output = `{criteria:[{id, points, evidence_quote, tip}], total, auto_fail, top_3_tips}` . Require an evidence quote for every score to cut hallucinated grading.
- **Cost (5-min call):** transcription ≈ $0.015 (≈ $0.0225 with gpt-transcribe) + grading (~7k in / 1.5k out) ≈ $0.0015 → **≈ $0.017–0.024/call**. Transcription is about 90% of the cost.
- **Tricks:** grade only calls longer than 60 seconds (connected conversations); batch overnight grading at 50% off; delete audio after 30 days.
- **Fallback:** trainer grades with the same rubric form.

E.6 Auto-generated flashcards & quizzes + spaced-repetition engine

- **Purpose:** turn every lesson into 10 flashcards and 8 quiz questions. Reps see what's due each day.
- **Prompt outline:** "From this lesson text, create {n} flashcards (front ≤12 words, back ≤25 words) and {m} MCQs with 1 correct answer and 3 plausible distractors, plus an explanation. Only use facts in the text. JSON."
- **Model:** gpt-6-luna via Batch. **Cost:** cents per entire curriculum.
- **Engine:** SM-2 (no AI needed). Intervals of 1 → 3 → 7 → 14 → 30 days, adjusted by Again/Hard/Good/Easy.
- **Fallback:** content from this document, preloaded.

E.7 "Pitch generator" (live-call assist)

- **Purpose:** turn a Capabilities Narrative into 3 talking points + likely service + one question in under 2 seconds.
- **Prompt outline:** "Narrative: {text}. State: {st}. Website scan flags: {flags}. Return JSON: {industry, size_guess, gov_mix_guess, lead_service, talking_points[3] (≤15 words each), first_question}. Follow the classification rubric: {rubric}. Do not invent facts about the company."
- **Model:** gpt-6-luna. **Cost:** ~800 in / 150 out ≈ $0.00016.
- **Tricks: pre-compute overnight in Batch for tomorrow's lead list** so the result is instant during the call and costs half. Cache by `hash(narrative)`, since many narratives repeat.
- **Fallback:** keyword lookup ("SECURITY OFFICERS" → guard template) from C1.2/C3.3.

E.8 Website-scan helper

- **Purpose:** paste a URL and get the 10-point checklist in plain English plus one suggested question.
- **Design:** the **deterministic checks run first, without AI:**
  - HTTPS and certificate validity
  - redirects
  - `<meta name="viewport">` (mobile)
  - © year regex
  - social link regex
  - /blog or /news links
  - "capability statement"/NAICS/CAGE text match
  - page weight/load time
  - generator meta (WordPress, Wix…)
    Then optionally send the **stripped text (≤3k tokens) + check results** to the model for a 3-line plain-English summary and a suggested question.
- **Model:** gpt-6-luna. **Cost:** ~3.5k in / 200 out ≈ $0.00045. Cache 7 days per domain.
- **Fallback:** checks only (still useful).
- **Note:** the fetch is server-side with a 5-second timeout. The rep still glances at the real page. The helper complements the 30-second look; it does not replace it.

E.9 Daily 5-minute drills, leaderboard & gamification

- Drill = 3 flashcards due + 2 objection drills + 1 "classify this SAM row" question + 1 tonality recording (self-rated or AI-rated from the transcript: words per minute, filler words).
- Leaderboard (weekly): drill streak, roleplay average, live scorecard average, meetings booked. Include *effort* metrics so new reps can compete.
- Badges: "First Booked Meeting," "10-Day Streak," "Objection Master (all 17 ≥8/10)," "Clean Compliance (90 days)."
- Cost: about $0.001/day per rep.

E.10 Coach digest for the sales lead

- **Weekly Batch job:** aggregate per-rep scores, the lowest-scoring rubric criteria, 3 call snippets worth listening to, AI-vs-human disagreement and cost against cap → a 1-page summary with "what to coach this week."
- **Prompt outline:** "Given this JSON of rep metrics, write ≤200 words per rep: 1 strength, 1 priority skill, 1 suggested drill, link to 1 call."
- **Cost:** < $0.01/week for the whole team.

E.11 Other cheap, creative ideas

- **"Hear yourself" voicemail grader:** rep records a voicemail → transcribe → check ≤20 seconds, says name twice, number twice, a specific observation, email reference.
- **Persona-of-the-day:** one random SAM.gov row becomes the day's roleplay persona for the whole team, with a leaderboard on that scenario.
- **Email follow-up drafter:** after a `VM`, draft email #1 from the observation note (≤90 words). The rep must edit it before sending.
- **Bytescon demo-question bank:** generate likely questions a BD manager would ask, so reps can rehearse the FAQ.

Part F — Compliance & Call Hygiene (general information, not legal advice; have a lawyer review)

F.1 What the rules generally say

1. **National Do-Not-Call Registry:** The FTC states the Registry prohibition "does not apply to business-to-business calls," apart from calls selling nondurable office or cleaning supplies. **But** consumers can register both residential landlines and wireless numbers, `ftc` and many SAM.gov "business" numbers are an owner's personal cell.
2. **Mixed-use cell phones are risky.** In Chennette v. Porch.com (9th Cir., Oct 12, 2022), the court held that cell phones on the DNC Registry are presumptively residential, even when used for both personal and business purposes. The caller must prove the number is a business line. Some B2B callers now scrub against the Registry anyway.
3. **TCPA autodialer / prerecorded rules apply to B2B calls to cell phones.** Calls and texts to

wireless numbers using an autodialer or artificial/prerecorded voice need prior express consent, whether the person is a consumer or a business owner. Texts count as calls. northwestern

4. **Company-specific do-not-call list:** even business numbers can ask to be put on *your* internal DNC list, and you must honor it.
5. **Call recording consent:** about 11–13 states require all parties' consent (sources disagree on the exact list). Commonly listed: **California, Connecticut, Delaware, Florida, Illinois, Maryland, Massachusetts, Michigan, Montana, Nevada, New Hampshire, Oregon, Pennsylvania, Washington.** When one party is in an all-party state, follow the stricter rule.
6. **State telemarketing laws** (some states have their own "mini-TCPA" rules, registration requirements and calling-hour limits) may apply even to B2B. inboundlabs Have counsel check the states you call most.

F.2 Simple rules every rep must follow (100% on the compliance quiz)

1. **Dial manually** (or with a counsel-approved dialer). **No autodialers, no prerecorded voicemail drops, no AI voice calling prospects.**
2. **Call only 8 a.m.–9 p.m. the prospect's local time.** (Best practice: 9–5 business hours.)
3. **Say who you are and the company name** at the start of every call.
4. **"Remove me" = remove immediately.** Say "Understood, I'll remove you," log `DNC`, and the system suppresses the number and email across all reps within 24 hours. **Never argue.**
5. **No cold texts.** Text only people who agreed to receive texts on a call (log the consent with date/time).
6. **Recording:** if the company records calls, **say on every call:** "Just so you know, this call may be recorded for quality and training." Simplest compliant policy is to say it on every call regardless of state. If the prospect objects, stop recording (the system needs a "stop recording" button) or end the call.
7. **Never lie or exaggerate:** no "we're with SAM.gov," no "government-approved," no fake clients, no guaranteed rankings or wins.
8. **Email follow-ups:** include a real sender, company address and an unsubscribe line (CAN-SPAM basics).
9. **Data handling:** don't paste prospect contact details into personal AI tools. Use the module's AI service, which strips contact names, emails and phones.

F.3 System controls (developer)

- Global suppression table checked before a number is shown to any rep.
- Optional DNC Registry scrub for numbers flagged as wireless (counsel decision).
- Recording flag per call, with a state lookup by area code / address state, and a consent checkbox required before upload to AI grading.
- Audit log of DNC requests with timestamp and rep.

Part G — Onboarding Timeline, Certification Gates & Lead's Time Savings

G.1 Day 1 → Day 90

Period	Rep activity	Gate / milestone	Sales lead's time
Day 1	Accounts, salary-system walkthrough, C1 (contractors, SAM rows), mindset lesson	—	1 hr welcome
Days 2–3	C2 services (websites, SEO, SMM, builds/AI, Bytescon); flashcards start	C2 quizzes ≥80%	30 min Q&A
Day 4	C3 dial-then-look, rubric, 9 worked examples; classification drill	**PRODUCT_CERT**	15 min review
Days 5–7	Track 2: call anatomy, openers, gatekeepers, voicemail, discovery, booking; 5+ AI roleplays/day; shadow live calls (listen-only, 2 hrs)	—	1 hr group roleplay
Days 8–9	Objections (all 17), psychology, tonality, follow-up, CRM codes, compliance	Objection drill ≥80%; compliance quiz 100%	30 min
Day 10	Final exam + 2 graded roleplays	**LIVE_CALL_CERT** → `training.certified` event → quota credit starts	1 hr (human review of 1 roleplay)
Days 11–30	Supervised live calling (60–80 dials/day), daily drill, AI-graded calls	Weekly scorecard avg ≥60; ramp 50% quota	30 min/week per rep (review queue)
Days 31–60	100 dials/day; Bytescon lesson + roleplay	Optional **BYTESCON_CERT**; ramp 75%	20 min/week per rep
Days 61–90	Full routine	Scorecard avg ≥70; full quota (Bridge Group benchmark: ~3-month ramp)	15 min/week per rep + coach digest

About the 2-week accelerated plan: reps are certified by about Day 10. That is faster than typical SaaS onboarding but reasonable here, because the product set is defined and the call goal is narrow

(book a meeting). If certification fails, repeat the failed module and re-test within 3 days.

G.2 How the sales lead's time drops

Task today (manual)	With the module
Explaining services repeatedly	Lessons + flashcards + quizzes
Live roleplay with each rep for hours	AI roleplay; lead reviews flagged sessions only
Listening to random calls	Review queue sorted by AI score/disagreement
Tracking who knows what	Dashboard + certification status
Ad-hoc ramp/pay decisions	Rules via `ramp_status` events to the salary system
Weekly coaching prep	Auto coach digest
Target: from roughly 15–20 hours per new rep in the first month to about 5–6 hours (measure your own baseline).	

Part H — Appendices

H.1 Objection quick-reference card

They say	You say (short)
Not interested	"Fair, you don't know what I do yet. One quick question, then I'll let you go?"
Send me an email	"Will do. Website or bids: which should it focus on?"
Already have a website/guy	"Great. Is it bringing in work, or more of a business card?"
No budget	"Understood. If budget weren't an issue, would this be worth a look?"
Call me later	"Sure. Tomorrow at 9 or 4?"
How'd you get my number?	"You're registered on SAM.gov; we work with registered contractors in [industry]."
Don't need SEO	"Is your work 100% government, or some private too?"
Don't do social	"Most contractors don't. Are you hiring right now?"

All work is government	"That's why I'm not calling about ads. What do primes find when they look you up?"
Too small	"Most of our clients are owner-run; that's why it's built just for your team."
Is this a sales call?	"It is. 20 seconds to tell you why, then you decide?"
Don't trust agencies	"It sounds like you've been burned. What happened last time?"
Use GovWin/Deltek	"Great for finding bids. Who builds the compliance matrix after?"
What does it cost?	"[PRICE] for X; the contract-mgmt build is $5–8k one-time + small yearly AI fee."
Talk to partner	"Want them on the 20-minute call? Tuesday or Wednesday?"
Remove me	"Understood, removing you now. Sorry for the interruption." → `DNC`
Tried before, didn't work	"What happened? What would 'working' look like?"

H.2 Opener cheat sheet

1. "Hi [Name], [Me] with Bytes Platform. How have you been? … The reason for my call is…"
2. "This is a cold call. Can I take 30 seconds to say why, then you decide?"
3. "Have you heard our name tossed around?" *(honest follow-up if no)*
4. "Would it be a terrible idea if I took 30 seconds to explain why I called?"
5. "A lot of contractors we talk to are finding bids late… how are you finding them today?"
6. "I'm on your website right now and noticed [X]. Is that on your radar?"
   Never: "Did I catch you at a bad time?"

H.3 Website-scan checklist card (30 seconds, while it rings)

□ Padlock/https □ © year □ Mobile-friendly □ Capability statement / NAICS / CAGE / certifications □ Social links & last post □ Blog/news/projects □ Template/stock look □ Load speed □ Contact form / click-to-call □ No site at all
→ Turn **one** finding into **one question**.

H.4 Classification rubric card

If…	**Lead with**
No website	New website (+ capability page)
Old/insecure/not mobile/no capability statement	Revamp
Bids often, BD team, many agencies/certs	Contract-management build ($5–8k one-time + yearly AI fee)

Private/local customers + invisible on Google	SEO (3 or 6 mo)
Inactive socials, hiring, local brand	SMM (6 posts + 3 reels + ad strategy/mo; ad spend paid to Meta)
Missed calls, spreadsheets, scheduling, quotes chaos	Automation / custom build / AI receptionist
Pure-federal	De-prioritize SEO/SMM; website + contract-mgmt

---

Caveats

- **Vendor data:** most cold-calling statistics come from Gong (a vendor) and are correlational. The opener figures differ between Gong's 2018 (90k calls) and 2024 (300M calls) analyses. Treat them as hypotheses to A/B test with your own reps.
- **Frameworks not deeply sourced here:** SPIN, Challenger, Gap Selling, Grant Cardone and Jordan Belfort appear only briefly, as common sales vocabulary. The scripts lean on the better-documented Gong, Voss, Braun, Sandler, NEPQ and Hormozi material.
- **Government-buyer behavior** (COs/primes checking websites) is described mostly by contractor-marketing firms. It is plausible and widely repeated, but not an official government rule.
- **AI pricing changes fast:** OpenAI is retiring several models within months. Re-check the pricing and deprecation pages quarterly and keep model IDs in config.

- **Legal:** Part F is general information, not legal advice. Have a TCPA attorney review the calling, recording and texting policy before launch.
